IMPACT AUDIT

Low **Reduce JavaScript execution time** TBT 749ms spent executing JavaScript

Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this.

Low **Avoid an excessive DOM size** TBT 611 elements

A large DOM will increase memory usage, cause longer style calculations, and produce costly layout reflows.

Total DOM Elements		611

Low **Eliminate render-blocking resources** FCP LCP Potential savings of 34ms

Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all non-critical JS/styles.

Resources that **may** be contributing to render-blocking include:

Low **Avoid chaining critical requests** FCP LCP 40 chains found

The Critical Request Chains below show you what resources are loaded with a high priority. Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Maximum critical path latency: **1.6s**
