#### ! Meta Title Test

This webpage is using a title tag with a length of 14 characters. While there's no target number of characters, titles should be descriptive and concise. Using a title tag with less than 20 characters is a missed opportunity since it can be difficult to fit all your targeted keywords in such a short text.

We recommend using a title with a length between 20 - 60 characters in order to fit Google Search results that have a 600-pixel limit.

**Text:** HOME - Welcome

**Length:** 14 characters

## ✖ Meta Description Test

This webpage is not using a meta description tag! You should include this tag in order to provide a brief description of your page which can be used by search engines. Well-written and inviting meta descriptions may also help click-through rates to your site in search engine results.

### How to pass this test?

In order to pass this test you must include a meta-description tag in your page header (<head> section):

```
<head>  
  <meta name="description" content="type_your_description_here">  
</head>
```

Note that in HTML the <meta> tag has no end tag but in XHTML this tag must be properly closed.

Meta description can have any length but a good practice is to keep this under 160 characters (search engines generally truncate snippets longer than this value).

## Google Search Results Preview Test

### Desktop version

```
https://icymaysolutions.com/  
HOME - Welcome
```

### Mobile version

```
https://icymaysolutions.com/  
HOME - Welcome
```

## ✔ Social Media Meta Tags Test

This webpage is using social media meta tags.

Open Graph Meta Tags	
og:locale	en_US
og:type	website
og:title	HOME - Welcome
og:url	https://icymaysolutions.com/
og:site_name	Welcome

Twitter Card Meta Tags	
twitter:card	summary_large_image

## ⦿ Most Common Keywords Test

There is likely no optimal keyword density (search engine algorithms have evolved beyond keyword density metrics as a significant ranking factor). It can be useful, however, to note which keywords appear most often on your page and if they reflect the intended topic of your page. More importantly, the keywords on your page should appear within natural sounding and grammatically correct copy.

## ✘ Keywords Usage Test

The most common keywords of this webpage are not distributed across the important HTML tags! Primary keywords should appear in title tag, meta description and heading tags to help Search Engines to properly identify the topic of this webpage.

Keyword	Title tag	Meta description	Headings
business	✘	✘	✘
solutions	✘	✘	✘
sourcing	✘	✘	✘
services	✘	✘	✘
contact	✘	✘	✘

## Keywords Cloud Test

## Related Keywords Test

There are no indexed keywords for this domain!

## Competitor Domains Test

There are no indexed competitors for this domain!

## ✘ Heading Tags Test

This webpage does not contain H1 headings! H1 headings help indicate the important topics of your page to search engines. While less important than good meta-titles and descriptions, H1 headings may still help define the topic of your page to search engines.

### How to pass this test?

In order to pass this test you must identify the most important topics from your page and insert those topics between `<h1>...</h1>` tags.

#### Example:

```
<h1>Important topic goes here</h1>
...
<h1>Another topic</h1>
```

## ✔ Robots.txt Test

Congratulations! Your site uses a "robots.txt" file.

<https://icymaysolutions.com/robots.txt>

## ✔ Sitemap Test

This website has a sitemap file.

[https://icymaysolutions.com/sitemap\\_index.xml](https://icymaysolutions.com/sitemap_index.xml)

## ✔ SEO Friendly URL Test

All links from this webpage are SEO friendly.

## ✘ Image Alt Test

This webpage is using "img" tags with empty or missing "alt" attribute!

### How to pass this test?

In order to pass this test you must add an **alt** attribute to every `<img>` tag used into your webpage.

An image with an alternate text specified is inserted using the following HTML line:

```

```

Remember that the point of alt text is to provide the same functional information that a visual user would see. Search engines, users who disabled images in their browsers and other agents who are unable to see the images on your webpage can read the alt attributes assigned to the image since they cannot view it.

Learn more about [optimizing images for SEO](#).

## ✘ Responsive Image Test

Not all images in this webpage are properly sized! This webpage is serving images that are larger than needed for the size of the user's viewport.

### How to pass this test?

This issue can be fixed by using responsive images, which relies on creating multiple versions of each image, that are served via CSS media queries depending on the user's viewport dimensions.

Another solution can be to use vector-based image formats like SVG. SVG images scale appropriately to any size, without wasting unnecessary bandwidth. Also consider image CDNs that can help serve responsive images.

## ✔ Image Aspect Ratio Test

All image display dimensions match the natural aspect ratio.

## ✘ Inline CSS Test

This webpage is using inline CSS styles!

### How to pass this test?

It is a good practice to move all the inline CSS rules into an external file in order to make your page "lighter" in weight and decrease the code to text ratio.

- check the HTML code of your page and identify all style attributes
- for each style attribute found you must properly move all declarations in the external CSS file and remove the style attribute

**For example:**

```
<!--this HTML code with inline CSS rule:-->
<p style="color:red; font-size: 12px">some text here</p>

<!--would became:-->
<p>some text here</p>

<!--and the rule added into your CSS file:-->
p{color:red; font-size: 12px}
```

## ✔ Deprecated HTML Tags Test

This webpage does not use HTML deprecated tags.

## ✘ Google Analytics Test

A Google Analytics script is not detected on this page. While there are several tools available to monitor your site's visitors and traffic sources, Google Analytics is a free, commonly recommended program to help diagnose potential SEO issues.

### How to pass this test?

In order to pass this test you must create an account on [Google Analytics site](#) and insert into your page a small javascript tracking code.

#### Example:

```
<!-- Google Analytics -->
<script>
(function(i,s,o,g,r,a,m){i['GoogleAnalyticsObject']=r;i[r]=i[r]||function(){
(i[r].q=i[r].q||[]).push(arguments)},i[r].l=1*new Date();a=s.createElement(o),
m=s.getElementsByTagName(o)[0];a.async=1;a.src=g;m.parentNode.insertBefore(a,m)
})(window,document,'script','//www.google-analytics.com/analytics.js','ga');

ga('create', 'UA-XXXX-Y', 'auto');
ga('send', 'pageview');

</script>
<!-- End Google Analytics -->
```

Note that you have to change the 'UA-XXXX-Y' with the proper id which you'll find in your analytics account.

## ✔ Favicon Test

 This website appears to have a favicon.

## ○ Backlinks Test

This domain has an Authority Score of 0/100 while the Average Authority Score of top 100 sites is 89.5. Also, this domain has 3 backlinks from 3 referring domains and some recently found backlinks are listed below:

NOV 11, 2023 <https://global-rank.pages.dev/26/AiAeGOTVLR>

OCT 12, 2023 <https://leshy.pages.dev/17/AiAeGOTVLR>

AUG 19, 2023 <https://www.xploredomains.com/2023-01-17?page=62>

## ✔ JS Error Test

There are no severe JavaScript errors on this webpage.

## ! Console Errors Test

This webpage has some warnings caught by the Chrome DevTools Console!

### How to pass this test?

In order to pass this test, you have to fix all the warnings reported in Chrome DevTools console. You can also visit Google's documentation for further troubleshooting support:

<https://developer.chrome.com/docs/devtools/issues/>

## ✓ Charset Declaration Test

This webpage has a character encoding declaration.

```
Content-Type: text/html; charset=UTF-8
```

## ✓ Social Media Test

This webpage is connected successfully with social media using:

[Facebook](#)

## Speed optimizations

6 Failed

2 Warnings

17 Passed

## ✗ HTML Page Size Test

The size of this webpage's HTML is **34.13 Kb**, and is greater than the average size of **33 Kb**! This can lead to slower loading times, [lost visitors](#), and decreased revenue. Good steps to reduce HTML size include: using [HTML compression](#), [CSS layouts](#), [external style sheets](#), and [moving javascript](#) to external files.

### How to pass this test?

In order to resolve this problem you are advised to:

- use gzip compression
- move all CSS style rules into a single, external and minified CSS file
- minify all JS files and, if possible, try combining them into a single external JS file
- use CSS layouts

## ✓ DOM Size Test

The Document Object Model (DOM) of this webpage has **647 nodes** which is less than the recommended value of 1,500 nodes.

## ✔ HTML Compression/GZIP Test

This webpage is successfully compressed using **gzip compression** on your code. The HTML code is compressed from 253.3 Kb to 34.13 Kb (87% size savings). This helps ensure a faster loading webpage and improved user experience.

## ✘ Site Loading Speed Test

The loading time of this webpage (measured from N. Virginia, US) is around **8.2 seconds** and is greater than the average loading speed which is **5 seconds**!

### How to pass this test?

In order to resolve this problem you are advised to:

- Minimize HTTP requests
- Use Gzip compression
- Use HTTP caching
- Move all CSS style rules into a single, external and minified CSS file
- Minify all JS files and, if possible, try combining them into a single external JS file
- Include external CSS files before external JS files
- Place your JS scripts at the bottom of your page
- Optimize images
- Reduce redirects
- Reduce the number of plug-ins

## ✔ JS Execution Time Test

The JavaScript code used by this webpage is executed in less than **2 seconds**.

## ✖ Page Objects Test

This webpage is using more than 20 http requests, which can slow down page loading and negatively impact user experience!

### Content size by content type

Content type	Percent	Size
Image	69.2 %	4.55 Mb
Javascript	12.8 %	863.28 Kb
Font	11.5 %	771.95 Kb
Css	4.8 %	321.77 Kb
Html	1.8 %	120.78 Kb
Other	0.0 %	0 B
<b>TOTAL</b>	<b>100%</b>	<b>6.58 Mb</b>

### Requests by content type

Content type	Percent	Requests
Javascript	50.9 %	57
Css	29.5 %	33
Image	9.8 %	11
Font	7.1 %	8
Html	2.7 %	3
Other	0.0 %	0
<b>TOTAL</b>	<b>100%</b>	<b>112</b>

### Content size by domain

Domain	Percent	Size
icymaysolutions.com	96.6 %	6.36 Mb
fonts.gstatic.com	2.6 %	173.98 Kb
static.addtoany.com	0.5 %	30.68 Kb

xeq.wxf.mybluehost.me	0.3 %	19.83 Kb
fonts.googleapis.com	0.1 %	3.48 Kb
<b>TOTAL</b>	<b>100%</b>	<b>6.58 Mb</b>

## Requests by domain

Domain	Percent	Requests
icymaysolutions.com	85.7 %	96
static.addtoany.com	6.3 %	7
fonts.gstatic.com	6.3 %	7
xeq.wxf.mybluehost.me	0.9 %	1
fonts.googleapis.com	0.9 %	1
<b>TOTAL</b>	<b>100%</b>	<b>112</b>

### ✓ Page Cache Test (Server Side Caching)

This webpage is using a caching mechanism. [Caching](#) helps speed page loading times as well as reduces server load.

### ✓ Flash Test

This webpage does not include flash objects (an outdated technology that was sometimes used to deliver rich multimedia content). Flash content does not work well on mobile devices, and is difficult for crawlers to interpret.

### ! CDN Usage Test

This webpage is not serving all resources (images, javascript and css) from CDNs!

#### How to pass this test?

In order to pass this test you are advised to use a CDN service. A Content Delivery Network (CDN) is a globally distributed network of web servers that allows a quick transfer of assets and provides high availability and high performance. The primary benefits of using a CDN service are:

- Improving website loading times
- Reducing bandwidth costs
- Increasing content availability and redundancy
- Improving website security

## ✘ Modern Image Format Test

This webpage is not serving images in a modern format! Image formats like [JPEG 2000](#), [JPEG XR](#), and [WebP](#) often provide better compression than PNG or JPEG, which means faster downloads and less data consumption.

### How to pass this test?

In order to pass this test, convert all the images listed in this report into a modern image format such as [JPEG 2000](#), [JPEG XR](#) or [WebP](#).

It's important to understand that the modern image formats, like WebP, are not yet widely supported across all devices and browsers. You can find [here](#) a full list of supported browsers and devices for the WebP format.

If your target audience falls within one of the unsupported browser/device categories, you should serve optimized fall-back images in the original JPEG/PNG format so that your users don't see a broken or badly designed page:

```
<!--Before:-->

<!--After:-->
<picture>
  <source type="image/webp" srcset="image.webp">
  
</picture>
```

The browser uses the first listed source that's in a format it supports. If the browser does not support any of the formats listed in the "source" tags, it falls back to loading the image specified by the "img" tag.

## ✔ Image Metadata Test

This webpage is not using images with large metadata.

## ✔ Image Caching Test

This website is using cache headers for images and the browsers will display these images from the cache.

## ✔ JavaScript Caching Test

This webpage is using cache headers for all JavaScript resources.

## ✔ CSS Caching Test

This webpage is using cache headers for all CSS resources.

## ✔ JavaScript Minification Test

All JavaScript files used by this webpage are minified.

## ✔ CSS Minification Test

All CSS resources used by this webpage are minified.

## ✘ Render Blocking Resources Test

This webpage is using render blocking resources! Eliminating render-blocking resources can help this webpage to load significantly faster and will improve the website experience for your visitors.

### How to pass this test?

In order to pass this test, you have to reduce the impact of render-blocking resources.

First, you have to identify what's critical and what's not. You can use the [Chrome DevTools \(Coverage tab\)](#) to identify non-critical CSS and JS.

Once you've identified critical code, you can try the below methods to eliminate render-blocking resources:

- inline critical JS within a script tag in your HTML document
- inline critical CSS required for the first paint inside a style block in the head of the HTML document
- move the script and link tags at the end of the HTML document
- add async or defer attributes to non-critical script or link tags
- split CSS styles into different files, organized by media query
- compress and minify your text-based resources

## ✔ Nested Tables Test

This webpage is not using nested tables. This speeds up page loading time and optimizes the user experience.

## ✔ Frameset Test

This webpage does not use frames.

## ✔ Doctype Test

This webpage has a doctype declaration.

```
<!DOCTYPE html>
```

## ✔ URL Redirects Test

This URL doesn't have any redirects (which could potentially cause site indexation issues and site loading delays).

## ✘ Largest Contentful Paint Test

The Largest Contentful Paint duration of this webpage is 8.18 seconds. To provide a good user experience, [Google recommends](#) that sites should strive to have Largest Contentful Paint of 2.5 seconds or less.

**Largest Contentful Paint element within the viewport:**

```
<div class="row-image row-image-normal ">
```

### How to pass this test?

The reason Google chose LCP as a relevant SEO metric is that it directly influences user experience. The loading of the biggest element on a page determines how quickly the user will be able to view its contents and interact with it. For most websites, you can improve the Largest Contentful Paint by sticking to a few guiding principles:

- Try to reduce the server response time.
- Eliminate as many render-blocking resources (CSS and JavaScript) as possible.
- Optimize the loading times for resources on the webpage.

## ✔ Cumulative Layout Shift Test

The CLS score of this webpage is 0.0070. To provide a good user experience, [Google recommends](#) that sites should strive to have a CLS score of 0.1 or less.

**DOM element which contributes the most to CLS score:**

Html:

Score: 0.0045

Server and security

4 Failed

0 Warnings

6 Passed

## ✔ URL Canonicalization Test

<https://icymaysolutions.com/> and <https://www.icymaysolutions.com/> resolve to the same URL.

## ✔ SSL Checker and HTTPS Test

This website is successfully using HTTPS, a secure communication protocol over the Internet.

- ✔ The certificate is not used before the activation date.
- ✔ The certificate has not expired.
- ✔ The hostname "icymaysolutions.com" is correctly listed in the certificate.
- ✔ The certificate should be trusted by all major web browsers.
- ✔ The certificate was not revoked.
- ✔ The certificate was signed with a secure hash.

### Certificate Chain:

## Mixed Content Test (HTTP over HTTPS)

This webpage is using mixed content! While the initial HTML is loaded over a secure HTTPS connection, other resources (such as images, videos, stylesheets, scripts) may be loaded over an insecure HTTP connection, which may result in blocked content or unexpected page behavior.

### How to pass this test?

In order to pass this test, make sure that all resources on the page are loaded over HTTPS.

## HTTP2 Test

This webpage is using the HTTP/2 protocol.

## Safe Browsing Test

This website is not currently listed as suspicious (no malware or phishing activity found).

## ✘ Server Signature Test

The server signature is on for this webpage! Turning off the server signature is generally a good idea from a security standpoint. Read more on how to [turn off server signature](#) and [improve the website's security](#).

```
Server: nginx/1.21.6
```

### How to pass this test?

By default, the Apache webserver sends HTTP headers with some information about your server version, operating system, modules installed, etc. This information can be used by hackers in order to exploit vulnerabilities (specially if you are running an older version). These information can be hidden or changed with very basic configurations.

Open Apache's configuration file (**httpd.conf** or **apache.conf**) and search for **ServerSignature**. If you find it, edit it to:

```
ServerSignature Off  
ServerTokens Prod
```

If you don't find it, just add these two lines at the end of the file.

Note that, after you modify the configuration file, you must restart the Apache server.

## ✔ Directory Browsing Test

Directory browsing is disabled for this website.

## ✔ Plaintext Emails Test

This webpage does not include email addresses in plaintext.

## ✘ Unsafe Cross-Origin Links Test

This webpage is using `target="_blank"` links without `rel="noopener"` or `rel="noreferrer"` attribute, which can expose it to performance and security issues!

### How to pass this test?

In order to pass this test, you have to update each link identified in this report, by adding a `rel="noopener"` or a `rel="noreferrer"` attribute or both:

```
<a href="https://example.com" target="_blank" rel="noopener noreferrer">  
  Click here  
</a>
```

- `rel="noopener"` prevents the new page from being able to access the `window.opener` property and ensures it runs in a separate process.
- `rel="noreferrer"` has the same effect but also prevents the **Referer header** from being sent to the new page.

## Mobile usability

0 Failed

0 Warnings

3 Passed

### ✔ Meta Viewport Test

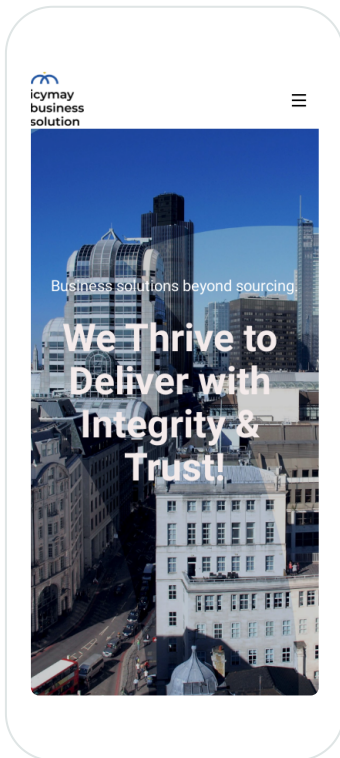

This webpage is using a viewport meta tag.

```
<meta name="viewport" content="width=device-width,initial-scale=1.0,maximum-scale=1" />
```

### ✔ Media Query Responsive Test

This webpage is using CSS media queries, which is the base for responsive design functionalities.

### ○ Mobile Snapshot Test

## Advanced SEO

3 Failed

1 Warnings

6 Passed

### ✔ Structured Data Test

This webpage is using structured data.

## ✘ Custom 404 Error Page Test

This website is not using a custom 404 error page! Default 404 error pages result in a poor experience - it can mislead users into thinking an entire site is down or broken, greatly increases the chance they leave the website entirely, and looks unprofessional. We recommend to have a custom 404 error page in order to improve the website's user experience by letting users know that only a specific page is missing/broken (and not the entire site), providing them helpful links, the opportunity to report bugs, and potentially [track the source of broken links](#).

### How to pass this test?

Creating a custom 404 error page can be relatively simple or more complicated, depending on what technologies were used to build your website (your web server, framework used, etc).

[Learn more about the basics of creating a custom 404 error page](#).

On your custom error page, you should provide relevant information to keep the user's attention so they remain on your website. Some steps to achieve this goal include:

- Adding links to your most important pages (your best articles/articles/content, latest posts, etc.)
  - If you have an e-commerce business, you can display special offers, product recommendations, discounts, etc.
  - Include a search box or a sitemap link to help users find the information they wanted.
  - Use simple language (non-technical) to explain what went wrong.
  - Add a contact form or provide an email address to allow users to get in touch with you for further help.
- You can also use your custom 404 error page to [track the source of broken links in your site](#).

## ✔ Noindex Tag Test

This webpage does not use the noindex meta tag. This means that it can be indexed by search engines.

## ✔ Canonical Tag Test

This webpage is using the canonical link tag. This tag specifies that the URL: <https://icymaysolutions.com/> is preferred to be used in search results. Please ensure that this specification is correct, as canonical tags are often hard-coded and may not always reflect the latest changes in a site's URL structure.

```
<link href="https://icymaysolutions.com/" rel="canonical"/>
```

## ○ Nofollow Tag Test

This webpage is using the nofollow meta tag! We recommend to use this tag carefully since search engines will not crawl all links from this webpage.

### How to pass this test?

If you want search engines to crawl all the outgoing links on your webpage you must remove the nofollow meta tag.

## Disallow Directive Test

Your robots.txt file includes a disallow command which instructs search engines to avoid certain parts of your website! You are advised to confirm if access to these resources or pages are intended to be blocked (e.g., if they contain internal-only content or sensitive information).

## Meta Refresh Test

This webpage is not using a meta refresh tag.

## SPF Records Test

This DNS server is using an SPF record.

```
v=spf1 include:zoho.com a mx include:websitewelcome.com ~all
```

## ✖ Ads.txt Validation Test

The access to the ads.txt file is restricted! Our request for this resource has returned a `{status_code}` HTTP status code. In order for this resource to be easily accessed by the DSPs and advertisers, its status code should be **200 OK**.

### How to pass this test?

In order to pass this test, the **ads.txt file** should be **publicly available** in the website's root domain and its content should be **properly formatted**.

The advertising systems will read the content of the ads.txt file only if the request will return a **200 OK** HTTP status code. The content of this file should be encoded as a formatted plain text and the HTTP Content-Type header should be **text/plain** (all other Content-Types are treated as an error and the content will be ignored).

As outlined in the [IAB Tech Lab specifications for ads.txt file](#), the format logically consists of three types of records: comments, data records and variables:

#### 1. Comments

Lines starting with **#** symbol are considered comments and are ignored.

#### 2. Data records

For each Exchange or Supply-Side Platform (SSP) that is authorized to sell your inventory you must add a data record. Each of these lines should contain 3 or 4 comma separated fields:

```
<FIELD #1>, <FIELD #2>, <FIELD #3>, <FIELD #4>
```

- #1 - The canonical domain name of the system where bidders connect (e.g. google.com, appnexus.com, etc)
- #2 - The publisher account ID
- #3 - The type of account or relationship (e.g. DIRECT or RESELLER)
- #4 - (Optional) An ID that uniquely identifies the advertising system within a certification authority

#### 3. Variables

Any line containing a pattern of **<VARIABLE>=<VALUE>** should be interpreted as a variable declaration. The **<VARIABLE>** is a string identifier without internal whitespace. The only supported separator is the equals sign '='. The **<VALUE>** is an open string that may contain arbitrary data.

For human readability it is recommended that variables be declared at the end of the file, but this is not a strict requirement.

Only the following variables are supported: **CONTACT**, **SUBDOMAIN** and **INVENTORYPARTNERDOMAIN**.
