Social Media Meta Tags Test

This webpage is not using social media meta tags! While this type of meta tags don't affect what people see when they visit the webpage, they exist to provide information about it to search engines and social media platforms.

How to pass this test?

In order to pass this test, you'll have to add social media meta tags into your webpage's "head" section. Social media meta tags are snippets of HTML code that control how URLs are displayed when shared on social media. Facebook and Twitter are, by far, the most popular social media platforms, so let's focus on those two.

Facebook uses meta tags leveraging the Open Graph protocol, which enables any web page to become a rich object in a social graph. A complete list of meta tags available can be found in the Open Graph website. You'll find there multiple tags and how to use them, but only four are required for Facebook to understand the basics of your page:

```
<meta property="og:title" content="Add title here">
<meta property="og:description" content="Add description here">
<meta property="og:image" content="https://your-website.com/og-image.png">
<meta property="og:url" content="https://your-website.com">
```

Twitter has its own meta tags that are similar to the Open Graph protocol, but uses the "twitter" prefix instead of "og". As with Facebook, only a few are required:

```
<meta name="twitter:title" content="Add title here">
<meta name="twitter:description" content="Add description here">
<meta name="twitter:url" content="https://your-website.com/twitter-image.png">
<meta name="twitter:card" content="summary">
```

Most Common Keywords Test

There is likely no optimal keyword density (search engine algorithms have evolved beyond keyword density metrics as a significant ranking factor). It can be useful, however, to note which keywords appear most often on your page and if they reflect the intended topic of your page. More importantly, the keywords on your page should appear within natural sounding and grammatically correct copy.

© 2022 SEO Site Checkup Page 3 of 22

Keywords Usage Test

The most common keywords of this webpage are distributed well across the important HTML tags. This helps search engines to properly identify the topic of this webpage.

Keyword	Title tag	Meta description	Headings
paul	×	X	×
have	×	X	X
life	×	✓	X
anxiety	✓	✓	√
mindset	✓	X	✓

How to pass this test?

In order to pass this test you must identify the most important topics from your page and insert those topics between <a href="https://hips.nc

Example:

<h1>Important topic goes here</h1>

<h1>Another topic</h1>

Robots.txt Test

Congratulations! Your site uses a "robots.txt" file.

https://mindsetchangeuk.com/robots.txt

Sitemap Test

This website has a sitemap file.

https://mindsetchangeuk.com/sitemap.xml

https://mindsetchangeuk.com/sitemap_index.xml

SEO Friendly URL Test

All links from this webpage are SEO friendly.

© 2022 SEO Site Checkup Page 6 of 22

Image Alt Test

This webpage is using "img" tags with empty or missing "alt" attribute!

How to pass this test?

In order to pass this test you must add an alt attribute to every tag used into your webpage.

An image with an alternate text specified is inserted using the following HTML line:

Remember that the point of alt text is to provide the same functional information that a visual user would see. Search engines, users who disabled images in their browsers and other agents who are unable to see the images on your webpage can read the alt attributes assigned to the image since they cannot view it.

Learn more about optimizing images for SEO.

Responsive Image Test

Not all images in this webpage are properly sized! This webpage is serving images that are larger than needed for the size of the user's viewport.

How to pass this test?

This issue can be fixed by using responsive images, which relies on creating multiple versions of each image, that are served via CSS media queries depending on the user's viewport dimensions.

Another solution can be to use vector-based image formats like SVG. SVG images scale appropriately to any size, without wasting unnecessary bandwidth. Also consider image CDNs that can help serve responsive images.

✓ Image Aspect Ratio Test

All image display dimensions match the natural aspect ratio.

© 2022 SEO Site Checkup Page 7 of 22

Inline CSS Test

This webpage is using inline CSS styles!

How to pass this test?

It is a good practice to move all the inline CSS rules into an external file in order to make your page "lighter" in weight and decrease the code to text ratio.

- check the HTML code of your page and identify all style attributes
- for each style attribute found you must properly move all declarations in the external CSS file and remove the style attribute

For example:

```
<!--this HTML code with inline CSS rule:-->
some text here
<!--would became:-->
some text here
<!--and the rule added into your CSS file:-->
p{color:red; font-size: 12px}
```

Deprecated HTML Tags Test

IS Error Test

We've found JavaScript errors on this webpage!

How to pass this test?

If your site has JavaScript errors it might not work properly, which can lead to improper or incomplete loading of content. It's hard to advise how to fix JavaScript errors since there are many different types, but here are some tips:

- First of all, you have to locate the source of errors;
- If you are using JS plugins or other third party code, you must carefully read the documentation;
- Syntax errors (a typo or missing character) are easy to fix;

Console Errors Test

This webpage has some errors caught by the Chrome DevTools Console!

How to pass this test?

In order to pass this test, you have to fix all the warnings and errors reported in Chrome DevTools console. You can also visit Google's documentation for further troubleshooting support:

https://developer.chrome.com/docs/devtools/issues/

HTML Page Size Test

The size of this webpage's HTML is **35.15** Kb, and is greater than the average size of **33** Kb! This can lead to slower loading times, lost visitors, and decreased revenue. Good steps to reduce HTML size include: using HTML compression, CSS layouts, external style sheets, and moving javascript to external files.

How to pass this test?

In order to resolve this problem you are advised to:

- use gzip compression
- move all CSS style rules into a single, external and minified CSS file
- minify all JS files and, if possible, try combining them into a single external JS file
- use CSS layouts
- O DOM Size Test

The Document Object Model (DOM) of this webpage has 951 nodes which is less than the recommended value of 1,500 nodes.

HTML Compression/GZIP Test

This webpage is successfully compressed using gzip compression on your code. The HTML code is compressed from 204.21 Kb to 35.15 Kb (83% size savings). This helps ensure a faster loading webpage and improved user experience.

© 2022 SEO Site Checkup Page 10 of 22

Site Loading Speed Test

The loading time of this webpage (measured from N. Virginia, US) is around 4.08 seconds and this is under the average loading speed which is 5 seconds.

JS Execution Time Test

The JavaScript code used by this webpage is executed in less than 2 seconds.

✓ Page Cache Test (Server Side Caching)

This webpage is using a caching mechanism. Caching helps speed page loading times as well as reduces server load.

© 2022 SEO Site Checkup Page 13 of 22

Flash Test

This webpage does not include flash objects (an outdated technology that was sometimes used to deliver rich multimedia content). Flash content does not work well on mobile devices, and is difficult for crawlers to interpret.

CDN Usage Test

This webpage is not serving all resources (images, javascript and css) from CDNs!

How to pass this test?

In order to pass this test you are advised to use a CDN service. A Content Delivery Network (CDN) is a globally distributed network of web servers that allows a quick transfer of assets and provides high availability and high performance. The primary benefits of using a CDN service are:

- Improving website loading times
- Reducing bandwidth costs
- Increasing content availability and redundancy
- Improving website security

Modern Image Format Test

This webpage is using images in a modern format.

Image Metadata Test

This webpage is using images with large metadata (more than 16% of the image size)! Stripping out unnecessary metadata tags can improve not only the loading time but also the security and privacy of a webpage.

How to pass this test?

In order to pass this test, you have to remove the unnecessary image metadata (additional information which is stored along with the image). There are literally hundreds of metadata tags, but most of them (like camera model and settings, exposure, creation date, etc) are useless to site visitors and isn't required by browsers to render images. However, a few metadata tags can still be useful and may help Search Engine bots to better understand your images:

- **GPS tags** These define where the image was taken providing location information that might help with local SEO. If you have a location-based business, tag your image with the GPS coordinates of your premises.
- Author/Owner Name Add your brand name (or your own name) here because it may influence the image being shown when someone searches your brand in Google Images.
- Image Description Just like an ALT description, the image description metadata tag can provide information pertaining to what the content of the image is about.

Image Caching Test

This website is using cache headers for images and the browsers will display these images from the cache.

© 2022 SEO Site Checkup Page 14 of 22

JavaScript Caching Test

This webpage is using cache headers for all JavaScript resources.

CSS Caching Test

This webpage is using cache headers for all CSS resources.

JavaScript Minification Test

All JavaScript files used by this webpage are minified.

CSS Minification Test

All CSS resources used by this webpage are minified.

Render Blocking Resources Test

This webpage is using render blocking resources! Eliminating render-blocking resources can help this webpage to load significantly faster and will improve the website experience for your visitors.

How to pass this test?

In order to pass this test, you have to reduce the impact of render-blocking resources.

First, you have to identify what's critical and what's not. You can use the Chrome DevTools (Coverage tab) to identify non-critical CSS and JS.

Once you've identified critical code, you can try the below methods to eliminate render-blocking resources:

- inline critical JS within a script tag in your HTML document
- inline critical CSS required for the first paint inside a style block in the head of the HTML document
- move the script and link tags at the end of the HTML document
- add async or defer attributes to non-critical script or link tags
- split CSS styles into different files, organized by media query
- compress and minify your text-based resources
- Nested Tables Test

This webpage is not using nested tables. This speeds up page loading time and optimizes the user experience.

Frameset Test

This webpage does not use frames.

© 2022 SEO Site Checkup Page 15 of 22

Doctype Test

This webpage has a doctype declaration.

<!DOCTYPE html>

✓ URL Redirects Test

This URL doesn't have any redirects (which could potentially cause site indexation issues and site loading delays).

Largest Contentful Paint Test

The Largest Contentful Paint duration of this webpage is 3.36 seconds. To provide a good user experience, Google recommends that sites should strive to have Largest Contentful Paint of 2.5 seconds or less.

Largest Contentful Paint element within the viewport:

<div class="upb_row_bg vcpb-vz-jquery" data-upb_br_animation="" data-parallax_sense="30" data-bgoverride="0" data-bg-animation="left-animation" data-bg-animation-type="h" data-animation-repeat="repeat"
style="background-size: cover; background-repeat: no-repe...">

How to pass this test?

The reason Google chose LCP as a relevant SEO metric is that it directly influences user experience. The loading of the biggest element on a page determines how quickly the user will be able to view its contents and interact with it. For most websites, you can improve the Largest Contentful Paint by sticking to a few guiding principles:

- Try to reduce the server response time.
- Eliminate as many render-blocking resources (CSS and JavaScript) as possible.
- Optimize the loading times for resources on the webpage.

© 2022 SEO Site Checkup Page 16 of 22

Cumulative Layout Shift Test

The CLS score of this webpage is **0.1652**. To provide a good user experience, Google recommends that sites should strive to have a CLS score of **0.1** or less.

DOM element which contributes the most to CLS score:

Text: Transformational Mindset and Anxiety Freedom coaching Is your anxiety getting in... **Html:** <div data-vc-full-width="true" data-vc-full-width-init="true" data-vc-stretch-content="true" class="vc_row wpb_row vc_row-fluid hide-back-image vc_cus..." style="position: relative; left: -335px; box-sizing: bord..." data-rtl="false" data-row-effect-mobile-disable="true" data-img-parallax-mobile-disable="false"> **Score:** 0.1418

How to pass this test?

Reducing CLS is crucial as pages that move around can result in a negative user experience (particularly on mobile devices). For most websites, you can avoid all unexpected layout shifts by sticking to a few guiding principles:

- Always include size attributes on your images and video elements, or otherwise reserve the required space
 with something like CSS aspect ratio boxes. This approach ensures that the browser can allocate the correct
 amount of space in the document while the image is loading.
- Try and avoid inserting dynamic content (e.g., banners, forms, etc.) above existing content unless in response to user interaction. This ensures any layout shifts that occur are expected.
- Prefer transform animations to animations of properties that trigger layout changes. Animate transitions in a way that provides context and continuity from state to state.

✓ Mixed Content Test (HTTP over HTTPS)

This webpage does not use mixed content - both the initial HTML and all other resources are loaded over HTTPS.

✓ HTTP2 Test

This webpage is using the HTTP/2 protocol.

Safe Browsing Test

This website is not currently listed as suspicious (no malware or phishing activity found).

Server Signature Test

The server signature is off for this webpage.

Directory Browsing Test

Directory browsing is disabled for this website.

Plaintext Emails Test

This webpage does not include email addresses in plaintext.

© 2022 SEO Site Checkup Page 19 of 22

▼ Unsafe Cross-Origin Links Test

This webpage is using target="_blank" links without rel="noopener" or rel="noreferrer" attribute, which can expose it to performance and security issues!

How to pass this test?

In order to pass this test, you have to update each link identified in this report, by adding a **rel="noopener"** or a **rel="noreferrer"** attribute or both:

```
<a href="https://example.com" target="_blank" rel="noopener noreferrer">
    Click here
</a>
```

- rel="noopener" prevents the new page from being able to access the window.opener property and ensures it runs in a separate process.
- rel="noreferrer" has the same effect but also prevents the Referer header from being sent to the new page.
